QUESTION 6/VRAAG 6

- 6.1 It is the (apparent) change in frequency (or pitch) of the sound (detected by a listener) ✓ because the sound source and the listener have different velocities relative to the medium of sound propagation. ✓

Dit is die verandering in frekwensie (of toonhoogte) van die klank (waargeneem deur 'n luisteraar) omdat die klankbron en die luisteraar verskillende snelhede relatief tot die medium van klankvoortplanting het.

OR/OF

An (apparent) change in (observed/detected) frequency (pitch), (wavelength) ✓ as a result of the relative motion between a source and an observer ✓ (listener).

'n Skynbare verandering in (waargenome) frekwensie (toonhoogte), (golflengte) as gevolg van die relatiewe beweging tussen die bron en 'n waarnemer / luisteraar.

- 11.4 Silver✓/Silwer

According to Photoelectric equation, $hf = W_o + \frac{1}{2} mv^2$
 (For a given constant frequency), as the work function increases the kinetic energy decreases. ✓ Silver has the smallest kinetic energy✓ and hence the highest work function./

Volgens die fotoelektriese vergelyking $hf = W_o + \frac{1}{2} mv^2$:

(Vir 'n gegewe konstante frekwensie) as die werksfunksie verhoog, verlaag die kinetiese energie. Silwer het die kleinste kinetiese energie en dus die hoogste werksfunksie.

(3)

11.5

(4)

11.6 REMAINS THE SAME ✓ / BLY DIESELFDE

Increasing intensity increases number of photons(per unit time) but frequency stays constant ✓
the energy of the photon is the same ✓ therefore the kinetic energy does not change.

Verhoging van die intensiteit verhoog die aantal fotone(per eenheidstyd) maar die frekwensie bly konstant

Foton se energie is dieselfde, daarom verander die kinetiese energie nie.
